

One cooperative. One direction.

SIGNATURE TRAVEL NETWORK

SIGCOMPASS

The reveal, and the tour. Signature's executive data engine.

DENISE GOSNELL, PH.D. · AUGUST 2026

We promised a revenue engine.

WE SAID

- ◆ Start with the revenue decision
- ◆ Build deep, not wide
- ◆ Automate the infrastructure
- ◆ Secure, scalable, observable
- ◆ 87% of data projects never reach production

WE SHIPPED

Revenue is a live data product: funnel, suppliers, advisors, by travel month

Three deep data products, not dashboards for everyone

AI-generated pipelines, rebuilt and re-verified on every change

One AWS environment, PII governed at the API layer, self-verifying assertions

This one is deployed, and you are about to use it

Gartner. Signature data strategy, February 2026.

Twenty years of digital transformation gave you data. It never gave you a decision.

Decisions are already being made across this business every day, by executives, advisors, leaders, and partners, whether the data is there or not. SigCompass exists to put the best available information in front of the person making the decision, at the moment they are making it.

The art of a data strategy is choosing which decisions we support first, and whether they move revenue.

WHERE REVENUE ACTUALLY SHOWS UP

Revenue starts at stage three.

01

REPORTING

What happened.

02

INSIGHT

Why it happened.

03

RECOMMENDATION

What to do next.

04

AUTOMATION

Repeatable at scale.

REVENUE BEGINS HERE

Most data programs stall between stages one and two, cycling through reports and definitions without ever crossing into action. That is not a failure of intelligence. It is a failure of sequencing.

WHY MOST OF THIS FAILS

Three ways a data program dies.

01

TIME

Slow infrastructure delays delivery until the business has already moved on.

02

MONEY

Investment keeps going in while the returns never arrive.

03

PEOPLE

Specialized teams are expensive, fragile, and hard to scale.

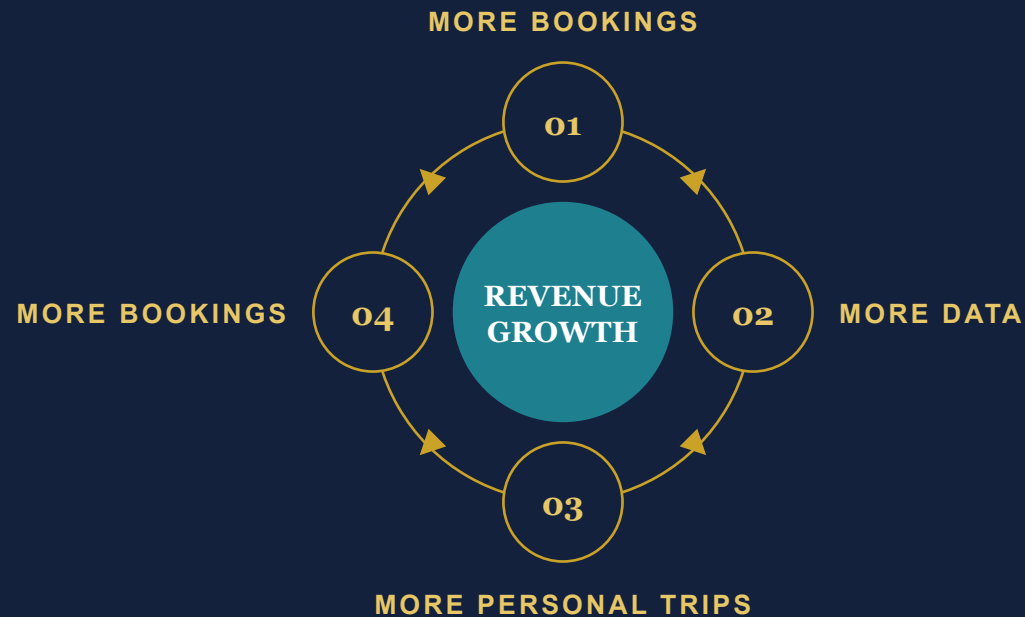

87%

of data science projects never reach production.

Gartner.

Every choice in this strategy was made to dodge one of those three.

The strategy flywheel.

01 MORE BOOKINGS

Every booking is revenue today, and a record tomorrow.

02 MORE DATA

Every booking and session enriches the shared asset.

03 MORE PERSONAL TRIPS

Advisors meet every client with full context.

04 MORE BOOKINGS

Personal experiences convert. The loop widens.

Bookings create data, data creates personalization, and personalization creates bookings. Our job is to make data flow in a way that grows revenue.

THE LOWEST-RISK PLACE TO START

Recommendations have a track record.

10-15%

increase in sales conversion from personalization.

McKinsey.

~35%

of Amazon's revenue is attributed to its recommendation engine.

Amazon, publicly reported.

Faster

time to booking and higher completion from AI-driven recommendations.

Booking Holdings.

WHY THIS IS THE LOW-RISK ENTRY POINT

- ◆ The decision already exists today.
- ◆ No process has to change to get value.
- ◆ Measurable inside six months, against revenue.
- ◆ The longest record of paying for itself early.

Not because recommendations are flashy. Because they have a documented history of paying for themselves early.

**A flywheel is a picture until
somebody turns it.**

PART TWO · MAKING THE FLYWHEEL TURN

From a picture to a rhythm.

A STRATEGY IS

- ◆ A direction everyone can name.
- ◆ A bet you can defend to owners.
- ◆ A picture on a slide.

AN OPERATING RHYTHM IS

- ◆ A number somebody owns.
- ◆ A weekly rhythm that shows whether it moved.
- ◆ A habit that survives you being on a plane.

The strategy is agreed. Now we build the weekly rhythm that makes the flywheel turn.

This is the executive workflow.

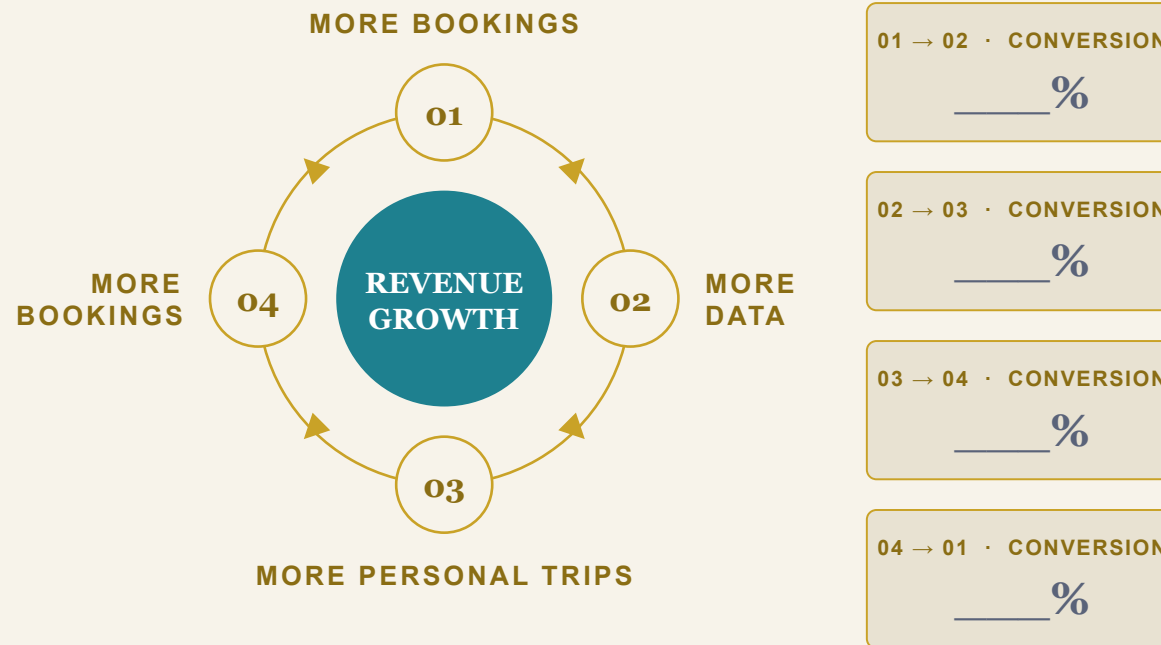

Everything we do this afternoon is one question asked twice: how does knowledge move across a business? Every company that has done this followed a recognizable pattern, and not one of them started at the end.

- ◆ **STEP 1 · WHERE WE ARE** · Get the data flowing from offer to closed booking, and measure the confidence gap at every handoff.
- ◆ **STEP 2 · NEXT** · Put that flow in front of the person making the decision, at the moment they make it.
- ◆ **STEP 3 · THEN** · Let it run without anyone remembering to run it.

We are at step 1. That is not a small ambition. It is the only one that makes steps 2 and 3 possible.

THE WORK AHEAD

Same flywheel, now with numbers.

WHERE WE POINT THE WORK

- ◆ **Measure every handoff.** Quoted to Confirmed to Travelled. Every stage, every month, by agency.
- ◆ **Find where we already win.** The stages and segments converting above the rest.
- ◆ **Double down there first.** Grow the flow where it is already flowing.
- ◆ **Then go after the losses.** With a proven path to compare them against.

These four numbers are what we fill in together.

Starting from a loss means guessing among many fixes. Starting from a win leaves one or two obvious moves.

HOW WE PICK THE NEXT MOVE

Build off the wins.

START FROM A LOSS

Why did this stall? Price. Timing. Data quality. Follow-up.
Supplier. Advisor load. The client simply changed their mind.

Seven candidate causes. Every fix is a guess, and every guess costs a quarter.

START FROM A WIN

- ◆ What did we do here that we are not doing everywhere else?
- ◆ **One or two answers. Both testable. Both already proven inside our own business.**

This is why SigCompass leads with what is working. Wins narrow your choices. Losses multiply them.

Learning to fly your ship.

A SHIP'S COCKPIT READS

- ◆ Currents.
- ◆ Weather.
- ◆ Depth beneath the keel.

YOUR COCKPIT READS

- ◆ Metrics.
- ◆ Weekly and monthly growth trends.
- ◆ The edge cases telling you what is working, and what is not.

Nobody reads one instrument once and knows where they are. You read them week over week, and the pattern appears: the waves, the currents, the headwinds actually moving your business.

That literacy is what we are starting to build together. Not the tool. The reading of it.

SO HERE IS THE POINT OF THE TOOL

SigCompass is your cockpit.

◆ SEE THE FLOW

Where offers become bookings, and where they stop.

◆ SEE THE GAP

Which handoff is leaking, by how much, this month against last.

◆ SEE THE WIN

Which agencies, advisors, suppliers, and segments convert above the rest.

◆ ASK IN PLAIN ENGLISH

The questions you would ask an analyst, answered from governed data.

Then you start making adjustments on where you are driving. Let's go look at it.

Let's take the tour.

PART THREE · SIGCOMPASS, LIVE

Interrupt freely. It is your engine.

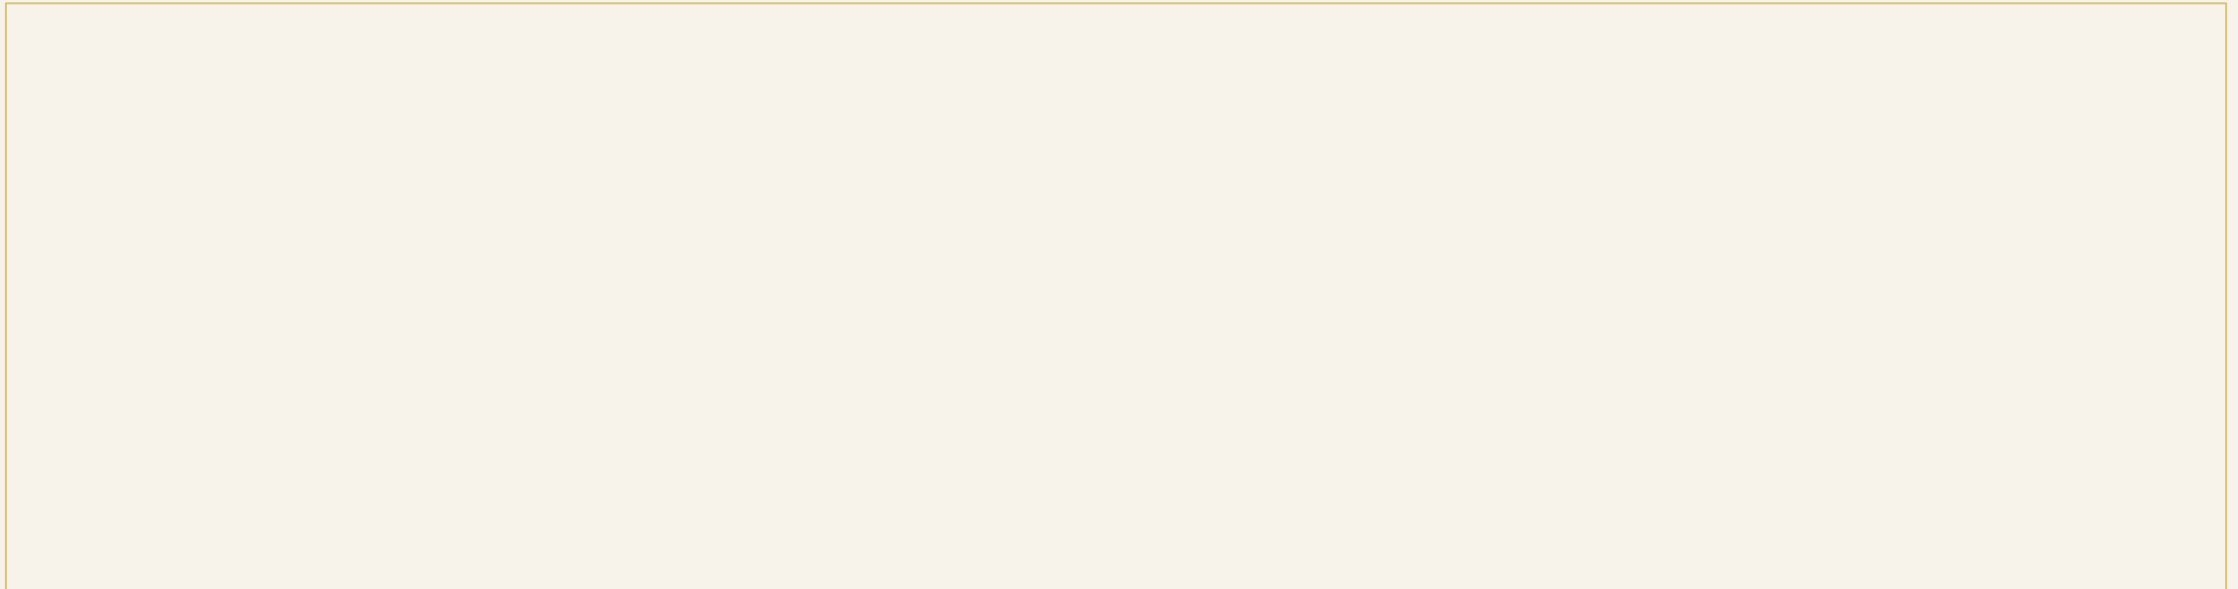

FIVE STOPS

What to watch for at each stop.

- | | | | |
|----------|----------------------------|---|--|
| 1 | Sign in from SigNet | One click, single sign-on, role-based access. | Watch for: <i>No new passwords, no new portals.</i> |
| 2 | Data quality | Client-record coverage by agency and advisor. | Watch for: <i>Where cleanup pays back fastest.</i> |
| 3 | Revenue | Quoted, Confirmed, Travelled by travel month.
Suppliers by name. | Watch for: <i>The shape of the funnel, and where it narrows.</i> |
| 4 | Booking journey | Journey analytics and hot leads by family. | Watch for: <i>The stage where a personal touch changes the outcome.</i> |
| 5 | Ask it anything | Plain-English questions over the same governed data. | Watch for: <i>That the answer and the chart come from one source.</i> |

LIVE

SigCompass.

Screenshot placeholder. Drop in the five tour captures before presenting.

IF THE NETWORK MISBEHAVES: captures of all five stops live in this frame. The tour survives a dead network.

THE DISCUSSION

If you had a magic wand.

1 What would it do for you, if it could do anything at all?

2 Where does it fit in the rhythm of how you run your week?

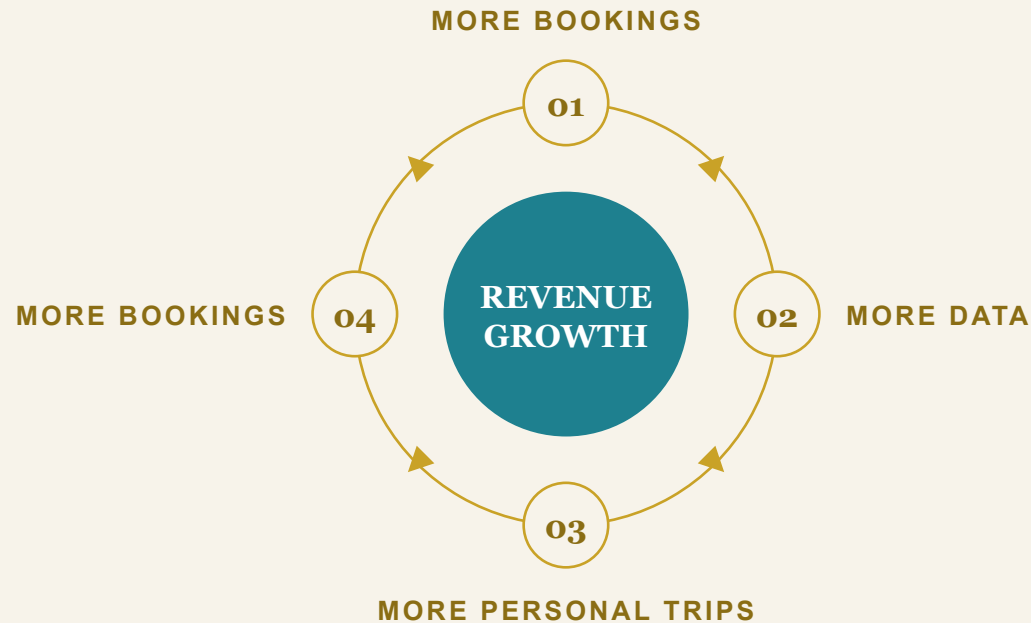

3 What information would you want in front of you, and how often?

4 Where should it show up: a screen you open, a number in a meeting, a message that finds you?

Capture every answer. This is the roadmap.

WHERE THIS LEAVES US

Now we make it turn.

WHAT MAKES IT TURN

- ◆ Data flowing from offer to closed booking.
- ◇ A number on every handoff, read weekly.
- ◇ A team that knows where it is winning, and doubles down there.
- ◇ An operating rhythm that runs without anyone remembering to run it.

The first one is done. The next two are this quarter. The fourth is execution, and that is exactly what the next session is about.

THE ROAD FROM HERE

From today to the Owners Meeting.

The only technical difference between non-prod and production is the volume of data. The engine is the same.

15 minutes.

Coffee. Then bring your laptop back.

BEFORE 2:40

- ◆ Laptop open, plugged in, on the venue network.
- ◆ Claude desktop installed and signed in.
- ◆ Your workspace invite accepted.
- ◆ Your work email login handy. You will connect it live.

NEXT: BUILD YOUR OWN DONNA ◆ 2:40 TO 4:10 ◆ THE EXECUTION SIDE OF THE SAME FLYWHEEL
